St. Thomas Aquinas High School Upgrades Their Building Trade Program's Door Production

In late October, 2009 Mark Masur of Aquinas High-School in David City Nebraska received the Unique Door Machine he had been hoping to add to his program. "It is a piece of equipment that will help us build a better final product while protecting the students as they learn."

The Aquinas program tasks students to learn while building a complete home each year, from framing to finished cabinets & doors. "Now we can add high-end doors to our homes" said Mark, who has plans to teach the students by contributing to local shops with a need for doors in addition to producing doors for the Building Trades home project. At the end of the school year each unit produced has been auctioned off to local bidders who are proud to live in these well built homes.

Students learn about the safety & benefits of the Unique 250

Mark Masur enjoys seeing the "light bulbs" come on as students begin to understand principles and take a greater interest in the skilled trades.

The Unique 250 door machine will allow all level students to complete more while taking less time and still produce a high-end product safely.
