Finished Edge Detail

Control Center & Load Meters

Using the same heavy-duty conveyor and hold-down system as the larger Model 325, The Model 336 adds the capability to shape & sand raised panel arches. Single tool capacity on its one shaper & two sander stations make this machine ideal for dedicated, high volume production. Digital indicators assist in fast tooling change-overs, allowing the same machine to be used for raised panel & edge detail shaping & sanding. The variable speed conveyor and sanding spindles give the operator maximum control for the best possible finish. Tilting sanding stations will accept a wide variety of sanding heads. Industrial duty construction along with precision adjustment capability make the model 336 the best value in its class.
